## **DETAILED ACTION**

### ***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, 6-21, drawn to selecting an optimal route based on dynamic and static conditions, classified in class 701, subclass 201.
  - II. Claims 22-24, drawn to updating selected travel route based on dynamic conditions, classified in class 701, subclass 210.
  - III. Claims 25-28, drawn to redirecting return when straying from the selected route is detected, classified in class 701, subclass 205.

Claims 4-5 link inventions group I to group II and claim 29 links invention group III to group II. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claims, claims 4-5, and 29. Upon the allowance of the linking claims, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicant is advised that if any such claims depending from or including all the limitations of the allowable linking claims is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of

Art Unit: 3661

35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions group I, group II and group III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination group I does not requires automatically updating the selected route, and redirecting the user to the selected route when straying is detected. The subcombination has separate utility such as automatically updating the navigation route based on changes of the route condition, and recomputing route when the selected route is not followed.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
